MICHIGAN'S **Produce Safety Risk Assessment** For fruit and vegetable producers

A voluntary and confidential produce safety program that provides confidence that inspected practices are consistent with the current U.S. Food and Drug Administration Produce Safety Rule and provides recognition with a certificate of program completion

MICHIGAN STATE UNIVERSITY Extension

Extension Bulletin E-3153 • June 2023

INTRODUCTION

()

Regardless of the size of your farming operation, using good production, harvest and postharvest management practices that keep disease-causing organisms and other contaminants off produce will help ensure the wellness of your customers and the success of your fresh produce business.

Many grocery chains and institutional produce buyers have addressed consumer food safety concerns by requiring a certified produce safety audit from their fresh produce growers and suppliers. A number of public and private organizations can assist producers who wish to have a certified audit.

Whether or not your fresh produce buyers require a certified produce safety audit, you may be interested in demonstrating that your farming operation uses safe food practices. If so, then the **Produce Safety Risk Assessment** (**PSRA**) may be for you.

The PSRA is a voluntary program designed to educate fresh fruit and vegetable growers about food safety and to recognize those who implement produce safety management practices. Producers who successfully complete the assessment and on-site farm review receive certificates of completion they can share with their consumers and buyers. The completion of the assessment will help you prepare for a certified produce safety audit. The PSRA is only a review of your farming practices and is not the same as a certified audit. It is also not a guarantee of food safety.

To become a Produce Safety-recognized producer, you must be able to demonstrate or document conformance with all of the key produce safety management practices applicable to your farm listed in the green-outlined boxes in the PSRA. The other produce safety management practices in the risk assessment (not in green-outlined boxes) are educational questions to assist in conformance with other laws, rules or regulations. Producers are encouraged to adopt all of the low-risk management practices listed in the PSRA, but only the green-outlined box practices will be evaluated for the awarding of a certificate of completion. The Food Safety Modernization Act (FSMA) was signed into law on January 4, 2011. The FSMA aims to ensure that the U.S. food supply is safe by shifting the focus from responding to contamination to preventing it. The FSMA requirements and guidelines that may affect produce farms are included in the PSRA. The FSMA is administered by the U.S. Food and Drug Administration.

How to get started:

The PSRA is a series of risk questions that will help you assess how effectively your management practices ensure food safety on your farm.

- 1. Contact your local produce safety technician to schedule a walkthrough of the farm and review of the PSRA.
- 2. Meet on the farm and review the assessment and parts of your operation that apply to produce safety, or schedule a follow-up to go through the assessment. Develop an action plan.
- 3. Implement action items and complete the food safety plan with continued assistance from the technician as needed.
- 4. The technician schedules another visit with you to check that the action items and food safety plan are ready to go (this may take multiple visits). Once complete, the technician submits a certificate to be signed and approved by the State of Michigan.
- 5. The technician will continue to be available to assist after completion. The technician will schedule a revisit with the farm on the 3-year mark of the awarding of a certificate. This is detailed as the "expiration date" on the certificate.

To schedule a produce safety farm review, contact your local produce safety technician. Your successful completion of this assessment, plan development and implementation as well as review will support the growing public interest in healthy local foods along with associated jobs and economic activity. Thank you for your interest and participation in the PSRA.

Michigan Department of Agriculture and Rural Development P.O. Box 30017 Lansing, MI 48909 800-292-3939

۲

	PRODUC	E SAFETY RISK A	SSESSMENT						
Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement				
1.01) Does the farm operator have a produce safety program that is followed to reduce the risk of foodborne illness?	A written produce safety plan* (document) exists and is being implemented.	Produce safety practices are generally followed, but a written document needs to be developed.	A food safety plan is not available.		A written plan or conformance with Cornell bulletin "Food Safety Begins on the Farm." Examples include <u>www.</u> <u>gaps.cornell.edu</u> or <u>onfarmfoodsafety.org</u>				
1.02) Does the farm operator have a person designated to implement and oversee a produce safety program?	The designated produce safety person is documented in the food safety plan.	Yes, but the written document needs to be developed.	There is no designated produce safety person.		Code of Federal Regulations (CFR) §112.23				
1.03) Has a farm representative completed the Produce Safety Alliance (PSA) Grower training?	Yes.		No.		Requirement of FSMA 112.22 (c)				

Definitions: A **document** may be a combination of standard operating procedures outlining company policy as well as a record indicating that a particular action was taken. A **policy** indicates that a policy/standard operating procedure (SOP) must be documented in the food safety plan to show conformance with the question. A **record** indicates a record is required to be kept showing an action was taken.

*Produce Safety Plan = Food Safety Plan

3

۲

	WORKE	R HEALTH AND H	YGIENE							
	Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement					
2.01) Does the farm operator provide workers with clean water to wash hands?	Water is provided by municipal water system. Or, Water is provided by a service provider that tests their water sources. Records are available. Or, Water is provided by an on-farm well that is tested at least annually and proven to have no detectable generic <i>E. coli.</i> Test records are on hand.	Water is provided from on- farm well that is not regularly tested. Or, Water is provided by a service provider and records indicating water quality are not readily available to the grower.	Water is provided from surface water source.		Water test reports indicate no detectable generic <i>E. coli</i> , or municipal drinking water is documented. §112.44(a)(4)					
2.02) Does the farm operator provide workers with clean drinking water?	Potable water is provided by a municipal water system. Or, Potable water is provided by an on-farm well that is regularly tested and proven potable with records.	Water is provided from on- farm well that is not regularly tested.	Water is provided from surface water source.		Occupational Safety and Health Administration (OSHA) requirement, Michigan Department of Environment, Great Lakes and Energy (EGLE) Safe Drinking Water Act.					
2.03) Does the farm operator provide staff training on proper sanitation, hygiene and food safety?	A training program is delivered to all staff and documented in the produce safety plan.	Informal training is provided that is not documented.	No training is provided.		Records indicate workers are adequately trained on sanitation and hygiene. §112.21(a) §112.22(a) §112.30(a)(b)					

	WORI	KER HEALTH AND	HYGIENE						
Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement				
2.04) Are all visitors informed of farm hygiene practices and provided proper toilet and hand-washing facilities?	Yes.		No.		§112.33(a)(b) §112.44(a)				
2.05) Do employees/workers wash their hands before beginning or returning to work or after any potential contamination?	Yes.		No.		Employee/worker interview(s) indicate(s) satisfactory hand- washing practices. §112.32(b) §112.44(a)				
2.06) Are signs posted to instruct employees to wash their hands before beginning or returning to work or after any potential contamination?	Yes. Signs are posted in the native language of the predominant number of workers.		No.						
2.07) Is employee tobacco use, eating and/or chewing gum confined to areas separate from where produce is handled?	Written policy indicates the use of tobacco, eating and/ or chewing gum is confined to edges of fields out of harvesting zones or in the driveway areas between fields, and this is observed. In packing and storing facilities, a smoking and eating area is in a designated area located separate from the produce flow zone, and this is observed.	It is observed, but written policy will be developed.	No. Use of tobacco, eating and/or gum chewing occurs in produce contact areas.		§112.32				

	WORI	KER HEALTH AND	HYGIENE						
Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement				
2.08) Are workers/visitors/ volunteers or anyone with potential to touch produce with diarrheal disease or symptoms of other infectious diseases prohibited from handling fresh produce or touching food contact surfaces?	Written policy prohibits sick worker contact with fresh produce. Supervisors are familiar with symptoms of infectious disease.	Yes, but a written policy will be developed.	No. Sick workers may continue to work in produce contact areas.		Written policy or employee/worker interview(s) indicate(s) sick workers are not allowed contact with produce. §112.31(a)(b)				
2.09) Is there a policy describing procedures for dealing with produce and food contact surfaces that come into contact with blood and/or other bodily fluids?	Written policy specifies handling/disposition of fresh produce and surfaces contaminated with blood and/or other bodily fluids.	Yes, but a written policy will be developed.	No.		§112.31				
2.10) Are workers instructed to seek prompt treatment for cuts, abrasions and other injuries?	Written policy requires workers to seek treatment for all injuries.	Yes, but the written policy will be developed.	No.						
2.11) Are company workers applying pesticides, sanitizing agents or other regulated materials certified or licensed?	Records indicate that workers are certified or licensed.		No.		Information on Restricted Use Pesticide Applicator permits <u>https://www.</u> michigan.gov/mdard/ <u>licensing/pesticide/</u> <u>pesticide-applicator-</u> <u>certification</u> (verified 4-18- 23)				

Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement				
3.01) Is production water quality monitored for the crop grown (covered or uncovered) and intended use? (i.e., irrigation, fertilizer application, frost protection, dust abatement, hand- washing, etc.)	Water never contacts the harvestable portion. OR Irrigation water provided by municipal system. Annual water test by local water authority is documented. Or, Irrigation water provided by an on- farm well that is tested annually and the results are documented. Or, Irrigation water provided by surface water that is tested within 14 days prior to use and the results are documented.	Surface water sources are tested once near harvest time. (Note: Water testing is especially important if water comes in direct contact with harvestable parts of the plant and the food is eaten raw.)	Water is provided from a source that is not tested.		Water test reports indicate water is safe for intended use. §112.44(b) Production water can be water used for irrigation, dust abatement, frost protection, hand- washing, etc. §112.44(b) Find a testing lab:				
3.02) Is water used during or after harvest, such as for hand- washing, cooling, ice, used on food contact surfaces, etc.?	Municipal water is used, and annual report is documented. Or, Well water is used and is tested at least annually, and results show no detectable generic <i>E. coli</i> .		Well water or surface water is used and not treated or tested.		§112.44(a) §112.44(a)(4) Water test reports indicate water is safe.				
3.03) Is production water source (if under your control) inspected at least annually and protected from potential direct and non-point sources of contamination?	Farm operator takes steps to minimize risk of water contamination (berms, diversions, fencing, etc.) and the source is inspected at least annually.		Water source is contaminated or not inspected (if under the grower's control).		§112.42(a) Production water can be for irrigation, dust abatement, frost protection, hand- washing, etc.				

WATER USAGE								
	Note: Gree	n text indicates proof of produce :	safety intentions.					
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement			
3.04) Are all water distribution systems inspected annually and maintained as needed?	All water distribution systems are inspected annually and maintained as needed.		Water distribution system(s) is not inspected.		§112.42(b)			
3.05) If used wash water is generated, is it disposed of in a manner that does not potentially contaminate food contact surfaces, produce or agricultural water sources?	No used water is generated Or wash water is disposed of in a manner that does not potentially contaminate food contact surfaces, produce or agricultural water sources.		Wash water potentially contaminates food contact surfaces, produce or agricultural water sources.

	ANIMALS/W	/ILDLIFE/LIVESTO	CK EXCLUSION						
Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement				
4.01) Are measures taken to restrict access of animals (domestic and wild) to the source or delivery system of agricultural water?	Every effort is made to restrict animal access, including use of noise cannons, scare balloons, fencing, and other barriers.	Some effort is made to limit animal access to agricultural water.	No effort made to limit animal access.		§112.41 and §112.42				
4.02) Are measures taken to restrict or minimize access of animals, domestic and wild, to crop production areas?	Every effort is made to restrict animal access, including use of noise cannons, scare balloons, fencing and other barriers.	Some effort is made to limit animal access to crop production areas.	No effort is made to limit animal access.						
4.03) Are crop production areas monitored for the presence or signs of wild or domestic animals entering the land?	Crop production areas are being monitored and records confirm monitoring activities.	Yes, monitoring is occurring, however records do not exist.	Production areas are not monitored for the presence of animals.		§112.83				
4.04) Are production fields assessed before harvest for possible sources of contamination?	The produce safety plan documents a preharvest assessment is completed and recorded.	A preharvest assessment is completed, but records do not exist.	No preharvest assessment is completed.						
4.05) Are any crop production areas located near or adjacent to dairy, livestock or fowl production facilities and/or a municipal sewage treatment plant or landfill? If so, are crop areas downwind of these facilities in the predominant wind direction?	There is no crop production within 1 mile of a livestock or poultry operation and/or municipal sewage treatment plant or landfill. Or, There is crop production within 1 mile, but a barrier prevents contamination of produce from runoff, dust or excessive numbers of flies.	A commercial livestock or poultry facility and/or municipal sewage treatment plant or landfill is located within 1 mile but greater than 100 yards away. Or, There is a barrier that prevents contamination of produce.	There is crop production within 1 mile. And, There is no barrier to prevent contamination of produce.		§112.83				

E-3153 MI Safety Risk Assess.indd 9

Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk - 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement				
	1	Raw manure		,					
5.01) If raw manure or other animal byproducts are used in crop production, is it applied in a manner that does not contact the harvestable portion of the crop?	Manure application records document that manure is soil incorporated and applied 270 or more days before harvest and does not touch any part of the harvestable product.	Manure application records document that manure is applied, and soil incorporated 120 or more days before harvest when the edible portion of the crop has soil contact or 90 days prior to harvest and does not touch any part of the harvestable product.			Manure use records indicat proper produce safety use practices. USDA NOP* >120 days if contact with harvestable portion and >90 days if no contact with harvestable portion \$112.56				
5.02) Is human waste applied on or near land used for the production of crops?	Human waste is not applied on or near land used for the production of crops OR human waste that is commercially treated and classified as class A biosolids is applied on or near land used for the production of crops.		Human waste is applied on or near land used for the production of crops.		§ 112.53				
5.03) If liquid manure storage structures are located near or adjacent to crop production areas, are they contained to prevent contamination of crops?	Storage structures are properly constructed and maintained to prevent leakage and overflow.		Storage structures are not properly constructed and maintained to prevent leakage and overflow.		\$112.52(a)				
5.04) If manure, compost or biosolids are stored either in the field or on the farm near production areas, are they contained to prevent contamination of crops?	No manure, compost or biosolids are stored near the crop production area.	All manure and compost are contained in accordance with generally accepted agricultural and management practices (GAAMPs). There is little to no potential for runoff to flow into the crop production area.	Manure, compost or biosolids can leach and/or run off into crop production areas and is not contained.		Proper manure storage demonstrated or indicated in records. §112.52(a)				

* NOP=National Organic Program

MANURE, COMP	MANURE, COMPOST AND MUNICIPAL BIOSOLIDS (Skip this section if manure, compost and/or biosolids are not used on the farm.)										
	Note: Green text indicates proof of produce safety intentions.										
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement						
		Composted Manure and Biosolic	ds		,						
5.05) If composted manure, dead animals and/or biosolids are used, is the material properly treated in a scientifically validated way to reduce the level of pathogens and do records exist?	The plan indicates materials have been treated to reduce the level of pathogens or, if received from a third party, a certificate has been provided. Records exist that indicate that process controls were achieved (e.g., time, temp, turnings).	Grower indicates that process controls were achieved, but no supporting documentation exists.	Treatment of the materials is unknown and there is no indication that process controls were achieved.		Compost use records indicate proper produce safety use practices. Once the compost has been documented as treated, no other untreated amendments can be added. §112.54, §112.55						

		SOILS							
Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement				
6.01) Have production fields been assessed for previous land uses that may pose contamination risks?	Yes. Records indicate there are no potential risks from previous land uses (dairy, livestock or poultry feedlot and/or improper use of animal wastes, farm dump or other potentially contaminating uses).	Fields are assessed, but records need to be developed.	No assessment of previous land use has been conducted.						
6.02) When previous land uses indicate possibility of contamination, have preventive measures been taken?	Prevention measures have been taken and records exist.	Prevention measures have been taken but records need to be developed.	No preventive measures have been taken to prevent food contamination.						
6.03) Are fields that are subject to flooding avoided to prevent crop contamination?	Yes.	Fields subject to flooding are used for non-food crops, portions of food crops that experience flooding are not harvested, or other precautionary measures are taken.	No precautionary measures are taken on high-risk fields.						

۲

12

	FIELD S	ANITATION AND H	YGIENE		
	Note: Green	text indicates proof of produce safe	ty intentions.		
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement
7.01) Are the number, condition, capacity and placement of toilet and hand-washing units in compliance with state and federal regulations?	At least one toilet and one hand-washing facility are available for each 20 or fraction of 20 workers.		OSHA regulations are not met.		Convenient field sanitation unit(s) confirmed. OSHA
7.02) Are toilet and hand- washing systems easily accessible to farm workers and are they using them?	Farm workers can easily get to toilets and hand-washing facilities, and they are being used.		Toilet and hand-washing facilities are difficult for farm workers to access or farm workers are not using them.		
7.03) Are field sanitation units located in a place that minimizes the risk for product contamination in the case of tipping, leaking or malfunction?	Field sanitation units are properly located to prevent or minimize risk of contamination to crop fields.		A spill or leak from a field sanitation unit may run into production area or product storage area.		Note: This question is n/a if farm does not use a field sanitation unit(s). §112.129(b)(1)
7.04) Are restrooms and field sanitation units located in an accessible place for servicing and are they adequately stocked?	Location is accessible. Unit has adequate supply of paper towels, water and soap.		Location is inaccessible. Or Unit does not have adequate supply of paper towels, water or soap.		
7.05) Does the farm operator have a response plan in the case of a spill or leak of a field sanitation unit?	A clean-up policy is in the produce safety plan. A spill response kit is ready and accessible to everyone on the farm.	A clean-up policy is in the produce safety plan.	No.		Note: This question is n/a if farm does not use a field sanitation unit(s).
7.06) Are sewage and septic systems monitored and maintained?	Facilities are periodically monitored and maintained in accordance with state and local laws.		No.		§112.131(a)(b)(c) §112.133(a)(b)(c)(d)

E-3153 MI Safety Risk Assess.indd 13

	FIELD HARVI	ESTING AND TRAN	SPORTATION						
Note: Green text indicates proof of produce safety intentions.									
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement				
3.01) Are harvesting containers that come in direct contact with produce cleaned and sanitized as appropriate and necessary or single use?	The containers are cleaned and sanitized as appropriate and necessary or are single use. Methods for cleaning and sanitizing are documented in the plan and records are kept.	The containers are cleaned and sanitized as appropriate and necessary or are single use and written documents will be developed and/or records will be kept.	Containers are not kept cleaned.		Clean harvest containers confirmed. §112.123(d)				
8.02) Is transportation equipment that comes in direct contact with produce cleaned and sanitized as necessary?	The transportation equipment is cleaned and sanitized as appropriate and necessary. Methods for cleaning and sanitizing are documented in the plan and records are kept.	The transportation equipment is cleaned and sanitized as appropriate and necessary and written documents will be developed and/or records will be kept.	Transportation equipment is not kept clean.		Clean harvest vehicles confirmed. §112.125(a) & (b)				
8.03) Are hand-harvesting mplements (knives, pruners, machetes, etc.) kept clean on a scheduled basis?	The hand-harvesting implements are cleaned and sanitized as appropriate and necessary. Methods for cleaning and sanitizing are documented in the plan and records are kept.	The hand-harvesting implements are cleaned and sanitized as appropriate and necessary and written documents will be developed and/or records will be kept.	Harvesting implements are not cleaned and sanitized.		Clean harvest implements confirmed §112.123(d) (1)				
8.04) Are containers inspected and are damaged containers properly repaired or disposed of?	Containers are inspected for damage on a regular basis. Damaged containers are repaired, discarded or used for other purposes and clearly marked.		Damaged containers are used in harvest operations.		\$112.22(b)				
8.05) Is harvest equipment and/or machinery in good repair?	Yes.		Leaking fluids and/or damaged parts may contaminate produce.		\$112.123(b)(2)				
8.06) Have the risks posed by chemicals, petroleum, pesticides, broken glass or plastic during the harvesting pperations been addressed?	The risks posed by product contamination have been addressed. And the written policy is available to outline steps to deal with product contamination.	The risks posed by product contamination have been addressed and a written policy will be developed.	Physical or chemical contaminants may end up in harvested produce.						

FIELD HARVESTING AND TRANSPORTATION						
	Note: Gree	en text indicates proof of produce	safety intentions.			
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement	
8.07) Are containers currently being used for harvest also used for carrying or storing non- produce items?	No. Written policy in the food safety plan does not allow harvest containers to be used for non-produce items.	Harvest containers are used to carry or store non-produce items and are clearly labeled as non-produce containers or they are being cleaned and sanitized between uses.	Harvest containers are used to carry or store non-produce items and are not labeled.		\$112.116	
8.08) Are efforts taken to remove excess dirt and mud from produce during harvest?	Every effort is taken to keep the produce adequately clean.		Dirt and mud contaminate harvested produce.		\$112.113	
8.09) How is dropped produce handled prior to harvest?	No dropped produce is collected, Or, Dropped produce collected from the ground is not distributed for human consumption.	Dropped produce is collected and sent for further processing with a scientifically valid kill step.	Produce is picked up from the ground and sold for raw human consumption.		§112.114	

	FIELD HAR\	ESTING AND TRA	NSPORTATION		
	Note: Gree	n text indicates proof of produce :	safety intentions.		
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement
8.10) If dropped produce is collected for processing that receives a scientifically valid kill step, what actions are taken to minimize cross-contamination of raw covered produce for human consumption?	Collection of dropped produce occurs after the collection of raw produce for human consumption to minimize potential cross-contamination of produce and produce contact surfaces.	Collection of dropped produce occurs during the collection of produce for raw consumption, but equipment used for dropped produce is distinctly marked and not used for other purposes, handled and stored separately, and hand-washing and equipment cleaning follows the collection of dropped produce.	Collection of dropped produce occurs during the collection of produce for raw consumption, the same equipment is used and not cleaned in between, and both types of products are stored together.		
8.11) Is harvested produce covered during transportation from the field?	Produce is protected, and farm policy in the produce safety plan requires produce to be covered with tarp or hauled in an enclosed trailer or truck, or protected by some other means.	Produce is covered, but a written policy needs to be developed.	Produce is not covered and is exposed to contamination by other vehicles, birds, dust, and other sources.

16

PRODUCE PACKING - FIELD OR PACKING HOUSE					
	Note: Gree	en text indicates proof of produce	safety intentions.		
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement
9.01) Are only new single-use or sanitized containers used for packing produce?	New single-use containers are used, and produce safety plan documents it.	Only cleaned and sanitized, reusable consumer containers are used.	Dirty, not sanitized containers are used.		New, sanitized or clean consumer containers confirmed. §112.116
9.02) Are produce containers and other packing materials properly stored and protected from contamination?	Produce containers and other packing materials are properly stored and protected from contamination.		There is a potential risk that containers and packing materials may become contaminated in storage area.		Proper storage of containers and packing materials observed. §112.123(b)(2) §112.116(b)
9.03) Are produce contact surfaces in packing area and equipment (including refrigeration units) in good condition, cleaned and sanitized on a regular basis?	Produce contact surfaces and areas are cleaned and sanitized on a regular basis and documented in the plan.	Produce contact surfaces and areas are cleaned and sanitized on a regular basis. A document will be written.	Soiled produce contact surfaces or packing area may contaminate produce.		Clean produce contact surfaces and packing area observed. §112.123(d)(1)
9.04) If you wash produce that is high risk, such as leafy greens, is it washed and stored after harvest in a way that minimizes potential contamination?	Yes. No water is used after harvest or a sanitizer is used and monitored frequently. Water temperature is adjusted if the differential between produce and water is greater than 10° F. Potential Infiltration is minimized.	A sanitizer is used, wash water is changed frequently, and/or only running water is used. Temperature is not monitored. Potential infiltration is minimized.	No.		§112.48

	PF	RODUCE TRACEAE	BILITY		
	Note: Gree	en text indicates proof of produce	safety intentions.		
Risk Question	Low Risk - 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement
10.01) Is the produce container or the product itself uniquely identified to allow trace-back to the farm where it was produced?	Yes. Traceability is documented. Mock recalls are performed annually.	Traceability program exists. Verification through mock re- calls have not been performed.	No traceability system exists.		Produce uniquely identified to allow traceability.
10.02) If the farm is qualified exempt, are you keeping proper records and providing complete business information on labels and/or signs?	Yes. Records are kept, and all labels and/or signs provide the complete name and business address of the farm where the produce is grown.		No.		§112.6(b)
	PESTICIDES A	ND CROP PROTEC	TION MATERIALS		
	NOTE: If the farr	n is MAEAP-verified for cropping sy	stems, skip this section.		
11.01) Is crop protection material mixing and loading adequately isolated from water sources and production fields?	-At least 200 feet from surface waters. -At least 150 feet from private wells. -At least 800 feet from public wells unless protective site features exist. -Adequate isolation to prevent contamination of production fields.		Isolation does not meet the minimum low-risk requirements.		*Note: See Michigan Agriculture Environmental Assurance Program (MAEAP) technician for additional information on reduced isolation requirement from public wells or the MAEAP Crop *A*Syst.
11.02) Are crop protection materials registered for use on the crops that are treated (the product label lists the crop as eligible for application)?	Products are registered for use with the Environmental Protection Agency and with the Michigan Department of Agriculture and Rural Development.		Products are not registered for use.		
11.03) Do crop protection material applicators read and follow the label instructions?	Everyone using crop protection materials follows label and labeling instructions.		Label and labeling instructions are not always followed.		

	Note: Gree	en text indicates proof of produc	e safety intentions.		
Risk Question	Low Risk – 3 (recommended to pass produce safety audit)	Medium Risk – 2 (potential produce safety hazard)	High Risk – 1 (significant produce safety hazard)	Your Risk	Produce Safety Review Requirement
1.04) Do applicators follow oreharvest interval requirements days to harvest)?	No produce is harvested after the last crop protection application until the minimum days have passed.		Harvest may occur before the preharvest interval is met.		
1.05) Are the applicators of estricted-use pesticides (RUP) ertified applicators?	The applicators of RUP comply with the certification requirements.		Non-certified and unsupervised applicators use RUP.		
1.06) How do you assure that besticide applications remain on-target and minimize off- target pesticide spray drift?	A written drift management plan is utilized that minimizes off-target drift.		Spraying operations are completed regardless of weather conditions or forecast, and regardless of the potential for off-target drift.		
1.07) What pesticide application ecords are kept?	Accurate records are maintained of all application of pesticides for at least three years (one year for general- use pesticides).	Partial records are kept.	No record is kept. Chemicals used are known by memory or invoices only.		Adequate pesticide records confirmed or plans to maintain complete application records.
1.08) How are excess mixtures and pesticide tank rinsate disposed of?	Excess mixtures and rinsate are used at or below label rates.		There is no plan in place to deal with excess mixtures or rinsate.		
1.09) Are crop protection materials and harvested products transported in the same vehicle or stored in the same storage area?	Never.	Yes, but after a thorough cleaning of the area.	Yes, without cleaning the area. Produce may become contaminated.		
	OTHE	R PRODUCE SAFI	ETY RISKS		
2.01) Are there no other mmediate produce safety risks (egregious condition) where produce is grown, processed, packed or stored?	No. There is no evidence of conditions or processes that have contaminated or can contaminate products.		Yes. There is evidence of conditions or processes that have contaminated or can contaminate products.		Technicians: Please see the "Egregious Conditions" document.
